# YOU DON'T HAVE TO CHANGE A BIT.

**MELFRED  
BORZALL**  
NOTHING BORES LIKE A BORZALL

## FASTBACK INSTANT-CONNECT PULLBACK ATTACHMENTS.

A small, mud-filled pit is the last place you want to change a drill bit. And now you don't have to, with the Fastback family of Pullback devices from Melfred Borzall. FastBack devices allow you to pull back product without ever taking off the drill head, so within minutes of completing the pilot bore you'll already be pulling pipes back. Fast and easy underground production that puts you ahead of the curve... that's the Borzall Edge.

### Overall FastBack Assembly Patent Pending

Special adapters for the FastBack system incorporate dual MudBoost fluid ports to ensure smooth, easy pullback with maximum flow.

Carbide hardfacing strategically placed by robot to increase the life of your FastReam housing.

Need a bigger hole but no room to install a backreamer? Just bolt on the FastReam blades and you can ream up to a 12" hole.

We have FastBack pullback attachments for any of our bits or blades. And our Borzall ValuDUB swivel keeps everything held perfectly in line for a smooth pullback.

All Fast Back pullback attachments hold the swivel in-line with rotation to minimize vibration and extend tool life during pullback.

NOTHING BORES LIKE A BORZALL

### FastBack Fast Ream Style Housing

In a tight spot but still need a big hole for multiple conduits? With FastReam Housing and Blades, you're able to enlarge a hole up to 12" without ever taking the drill head off. Modeled after our Terminator blades, FastReam blades just drop into place and are secured with a bolt, giving you an aggressive cutting action to get the hole you need. And the exclusive Mud Boost adapter allows for maximum drill fluid to flow, ensuring a slick pullback.

### FastBack Iron Eye Pullback Device

The Iron Fist is an incredible addition to your HDD arsenal when you're up against cobble conditions. Instead of taking the drill head off just to pullback a small duct, the Iron Eye turns your Iron Fist into a great pullback device. Just drop it onto your Iron Fist and secure it with the bolts. The Iron Eye is loaded with carbide hardfacing to make it one long-lasting tool, and with our ValuDUB Swivel, your pullback will be smooth and fast.

### FastBack Eagle Eye Pullback Device

For those tough bores, the Eagle Claw is one of the best selling HDD bits. And now it's gotten even better with the addition of the Eagle Eye pullback attachment. With the Eagle Eye you'll be ready for direct pullback in a matter of minutes. Just drop it onto your Eagle Claw bit and secure it with the bolt. You're in tough conditions when you're using the Eagle Claw, so it's built just as tough with button carbides for wear and actual cutting if needed. And with our ValuDUB Swivel, your pullback will be smooth and fast.

### FastBack Quick Swivel

The fastest and most secure way to get your duct pulled back directly with your Borzall blade is with the Quick Swivel. Just bolt on this 5-ton swivel to your Excalibur or UltraBit, and start pulling. The Quick Swivel has the same incredible sealing system and bearings as the ValuDub swivels, plus a unique locking feature to ensure it's held in line with rotation, minimizing vibration to maximize bearing life.

### FastBack Quick Link Pullback Device

Already have a swivel and a Borzall blade? Get rid of those weak and cumbersome shackles and step up to the Quick Link pullback attachment. Simply bolt it onto your Borzall blade and you're ready to attach a swivel to start pullback. And with a Borzall ValuDUB Swivel, everything will be kept on the centerline of rotation for a smooth, fast pullback.
