

INTRODUCING THE NEW

# SERVICE SHOT SYSTEM

Melfred Borzall's system to increase production speed for short, shallow service installations.

- Limited Fluid Option
- Faster Cleanup
- Shorter Housing
- Smaller Setup Area
- Threadless Bit Connection
- Faster Steering
- Won't Snag Other Utility

**NEED  
FASTER  
PRODUCTION  
WITH YOUR  
SERVICE  
SHOTS?**

The Service Shot System was designed to safely and efficiently expedite short, shallow bores. These are often residential service line shots from the street to a house, or across a driveway. These scenarios often involve many shots within a single day that require fast, easy steering around other utility lines underground and minimal cleanup between shots to keep production rates high. The Service Shot System provides a small diameter housing and bit designed for limited fluid use that makes each shot quick and not-so-dirty.

# WHEN IS SERVICE SHOT THE RIGHT CHOICE?

Go with the  
Service Shot System

Go with an  
SD Housing Setup

I need an option to use limited fluid for faster cleanup  
I have a tight setup area & need a shorter, zero-point entry  
I need something without teeth that won't risk snagging unmarked utility  
I need to decrease my rod time from 10 minutes to 2 minutes  
We have multiple short shots we need to get done in a day  
I want a threadless solution for connecting bits

We are drilling over 150ft in a single shot  
I need to run high RPMs for the ground I'm in  
I need to run a lot of fluid with a special mud mix for my ground type  
My ground type calls for carbide protection and cutter teeth on my bit  
I'll be pulling back greater than 10,000 lbs of utility on pullback

## DIRECT-CONNECT PULLBACK

Threadless pulling eye option  
or reamer + pulling eye option  
with a Valu-DUB swivel

## FASTER STEERING BIT

Increased angle on the steerface  
and tooth-free design decreases the  
risk of snagging unmarked utility

## EASY SONDE CLOCKING

Bit tab mates DigiTrak™ notch for  
clocking in the right direction

## DIGITRAK™ COMPATIBLE

Housing accommodates standard  
15" DigiTrak™ & U-Mag Sondes

## ROLL PIN SECURITY

Quick tap and go action to secure  
or release your sonde

## SHORTER LENGTH HOUSING

Creates a shorter setup area when  
a shorter, direct-connect option is best

## SPRING TENSION HOLD

Spring hold transmitter in place &  
limits vibration

## OTHER KEY FEATURES

- Compatible Rigs (<10,000lbs):  
JT10, JT921, JT922, D8x12,  
D10x15, D7x11, D6x6
- End-load housing for 15" DigiTrak  
and U-Mag transmitters
- Threadless bit attachment
- Roll pin front connection security
- Limited fluid = faster cleanup
- Best suited for under 150' shots
- The small diameter provides faster,  
easier steering around unmarked  
or crowded utility areas
- Compatible adapters: 31M-09M-12,  
31M-01M-12, 31M-31F-12
