Santa Maria, CA 01/06/2016—Melfred Borzall's one-of-a-kind patent-pending FastBack™ system is changing the way contractors handle HDD installations.

FastBack™ is Borzall's new system for direct pullbacks without removing the drill head or installing a backreamer. FastBack™ is ideal for fiber installation where space is often a concern. This unique system includes the FastReam™ housing – used in place of a reamer to enlarge the hole during pullback – and one of our Eagle Claw, Iron Fist or blades fitted for the Eagle Eye; the Iron Eye; the Quick Link, or the Quick Swivel. Once the pilot bore is complete, simply attach the FastBack™ tool and pull your product in one direct pullback.

Made to complete multiple short bores per day and increase production; minimize excavation and restoration costs; and save time on bores, the FastBack™ system is the backbone of HDD tooling.

FastBack™ is only available from Melfred Borzall. Contact MBI at 800-558-7500 or melfredborzall.com.
